

BRICS YOUTH ENERGY COMPACT

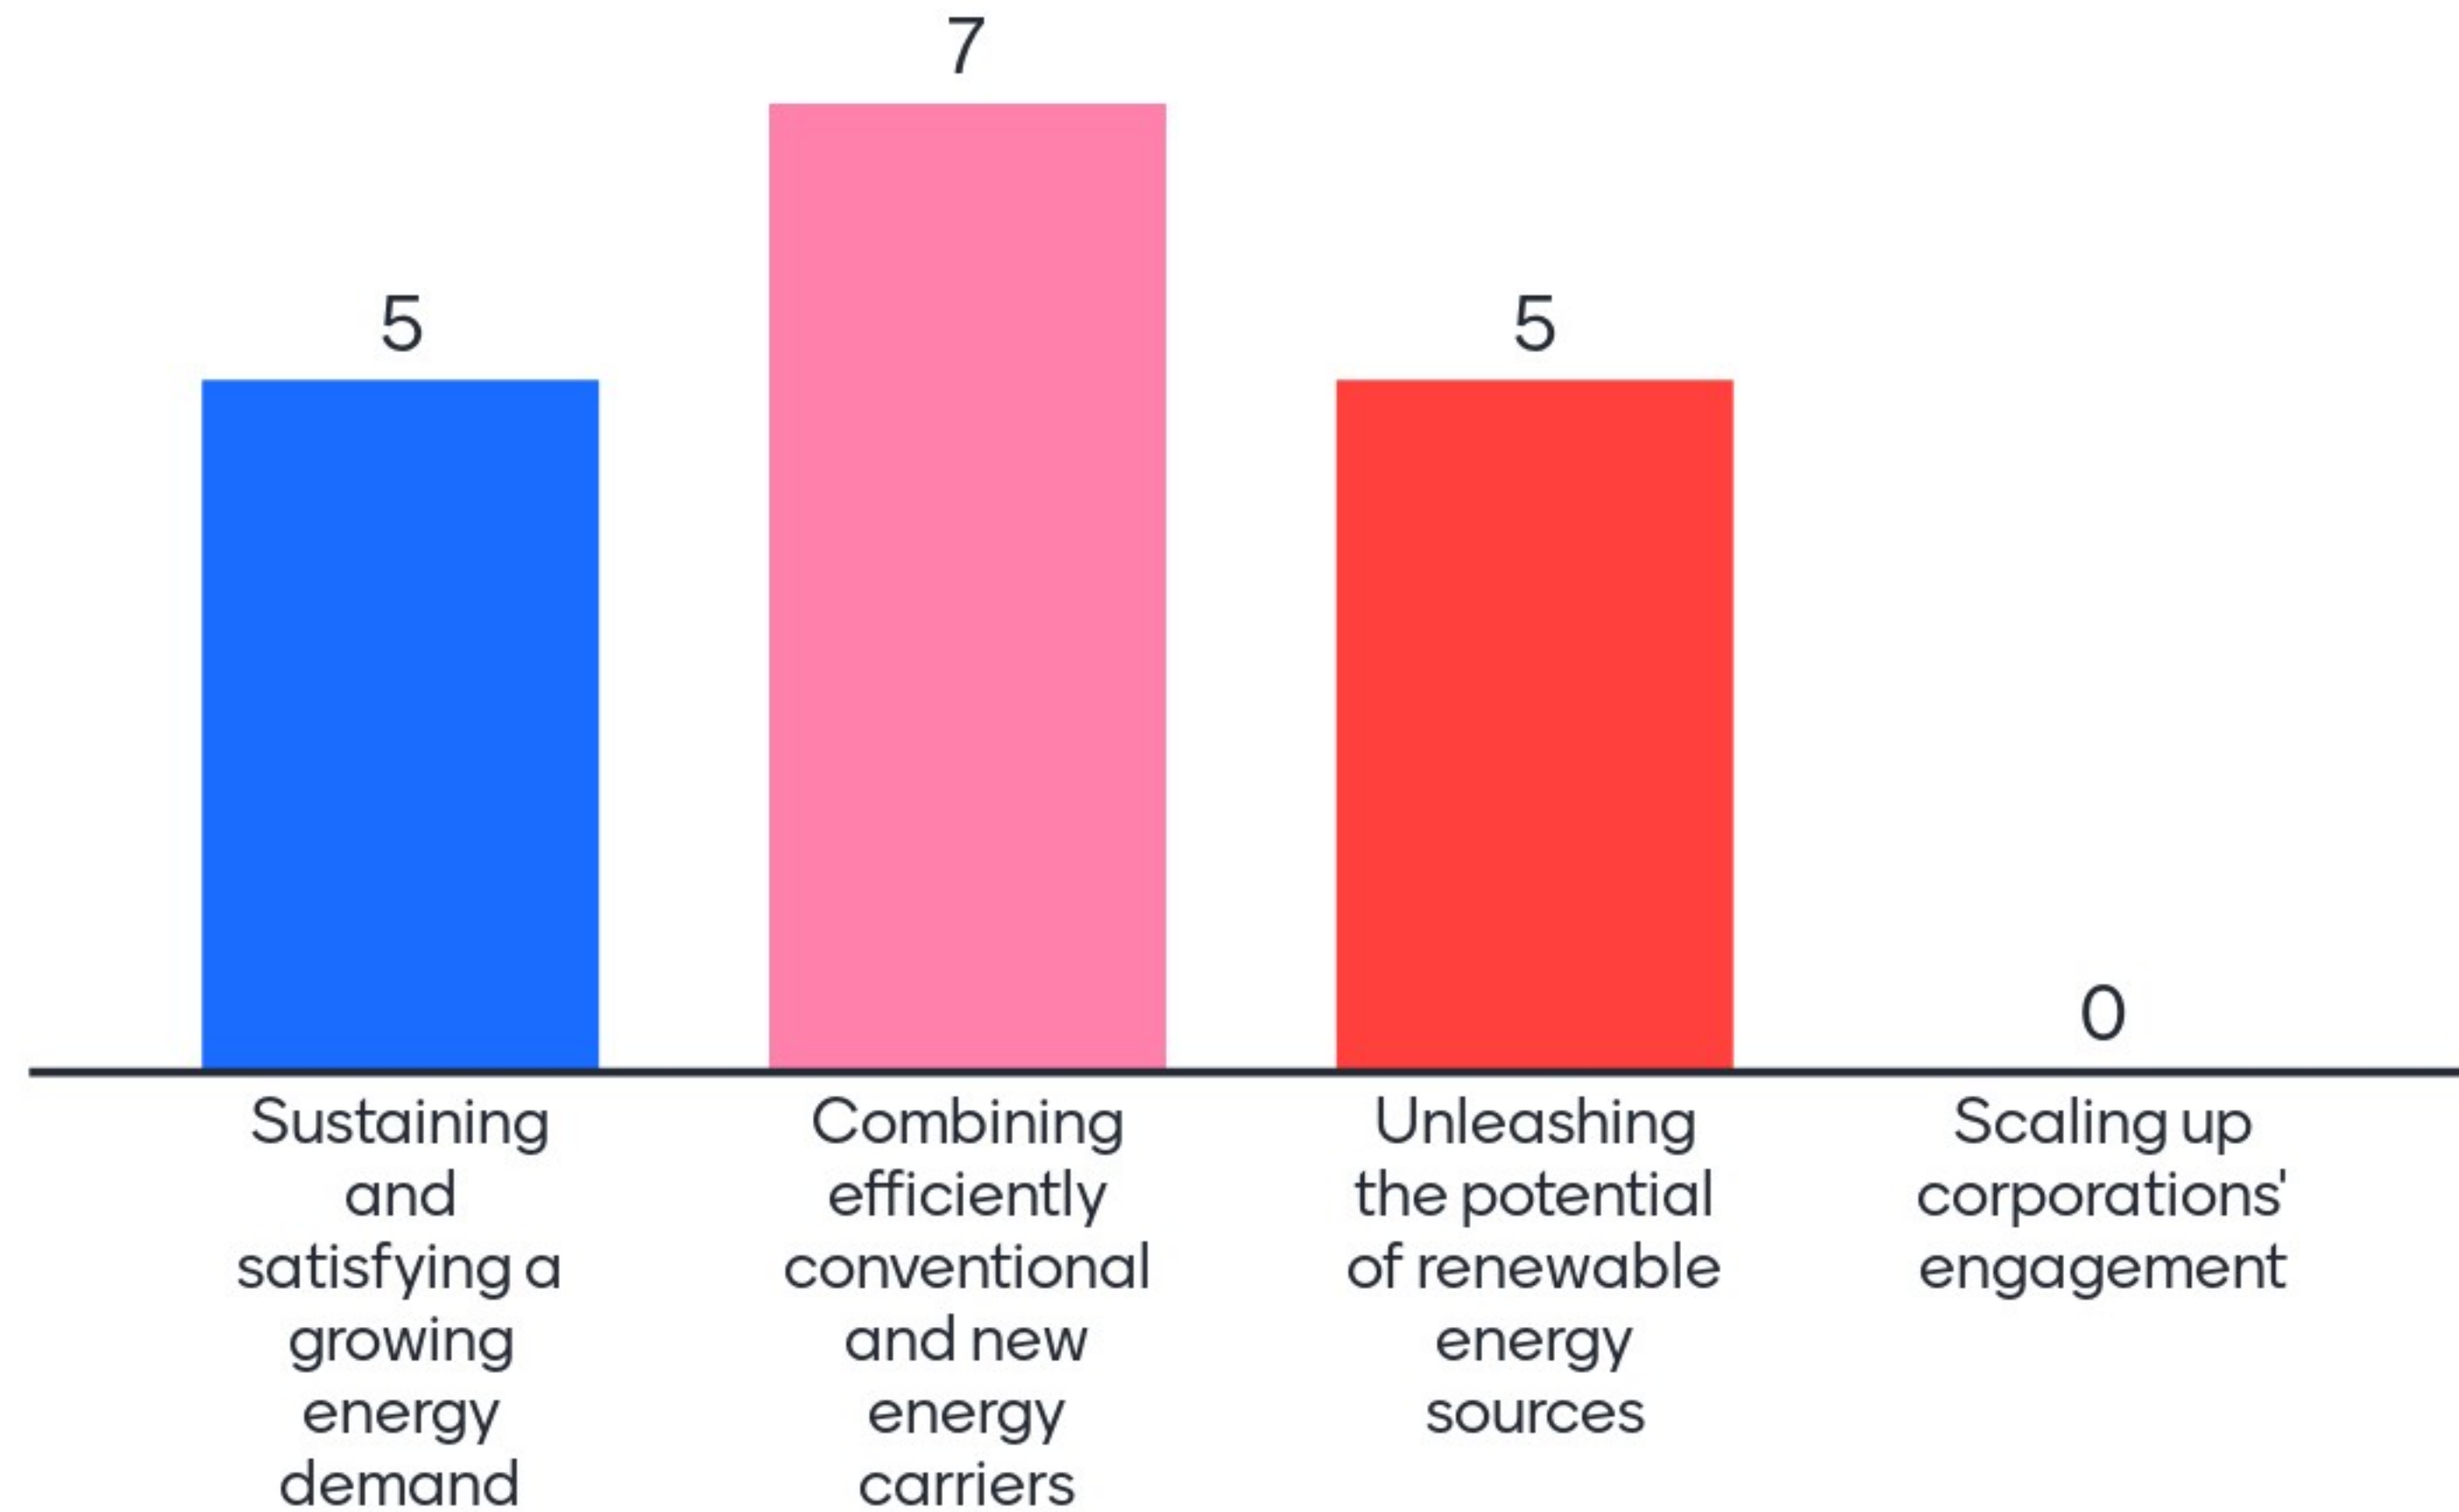

UNITING THE EFFORTS FOR SDG7

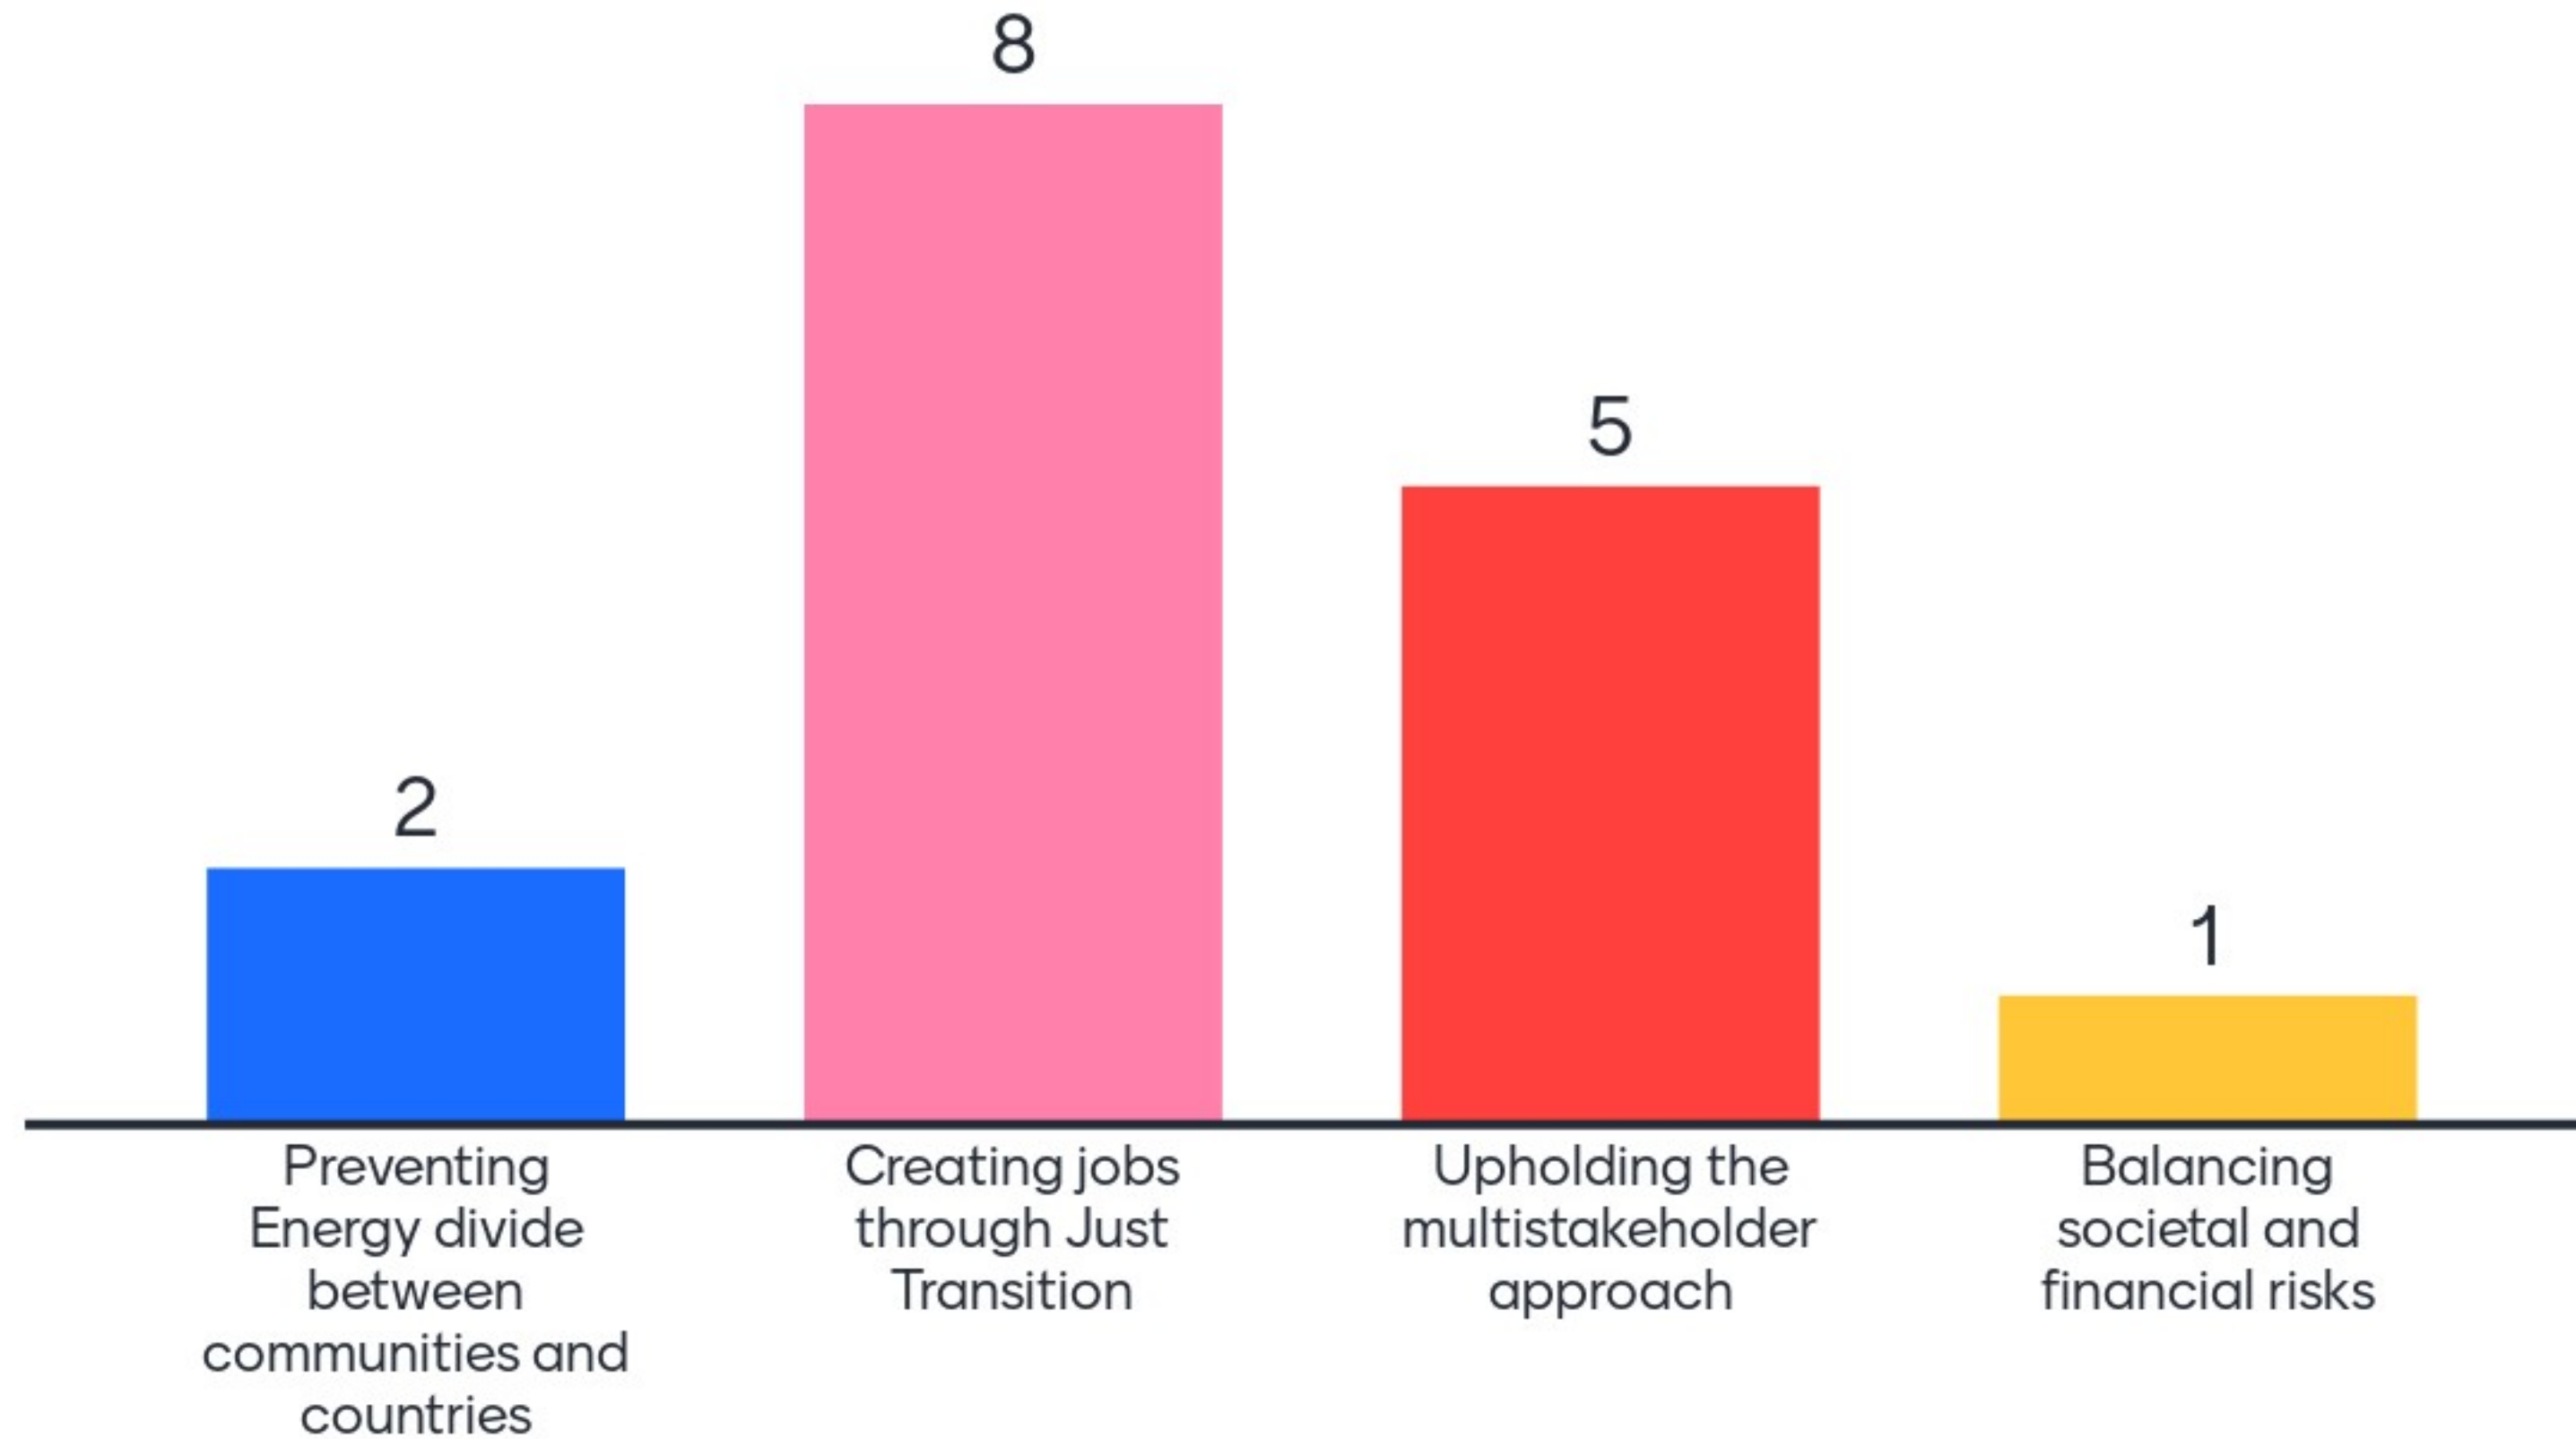

Energy Access: what issues do you think should be addressed in particular?

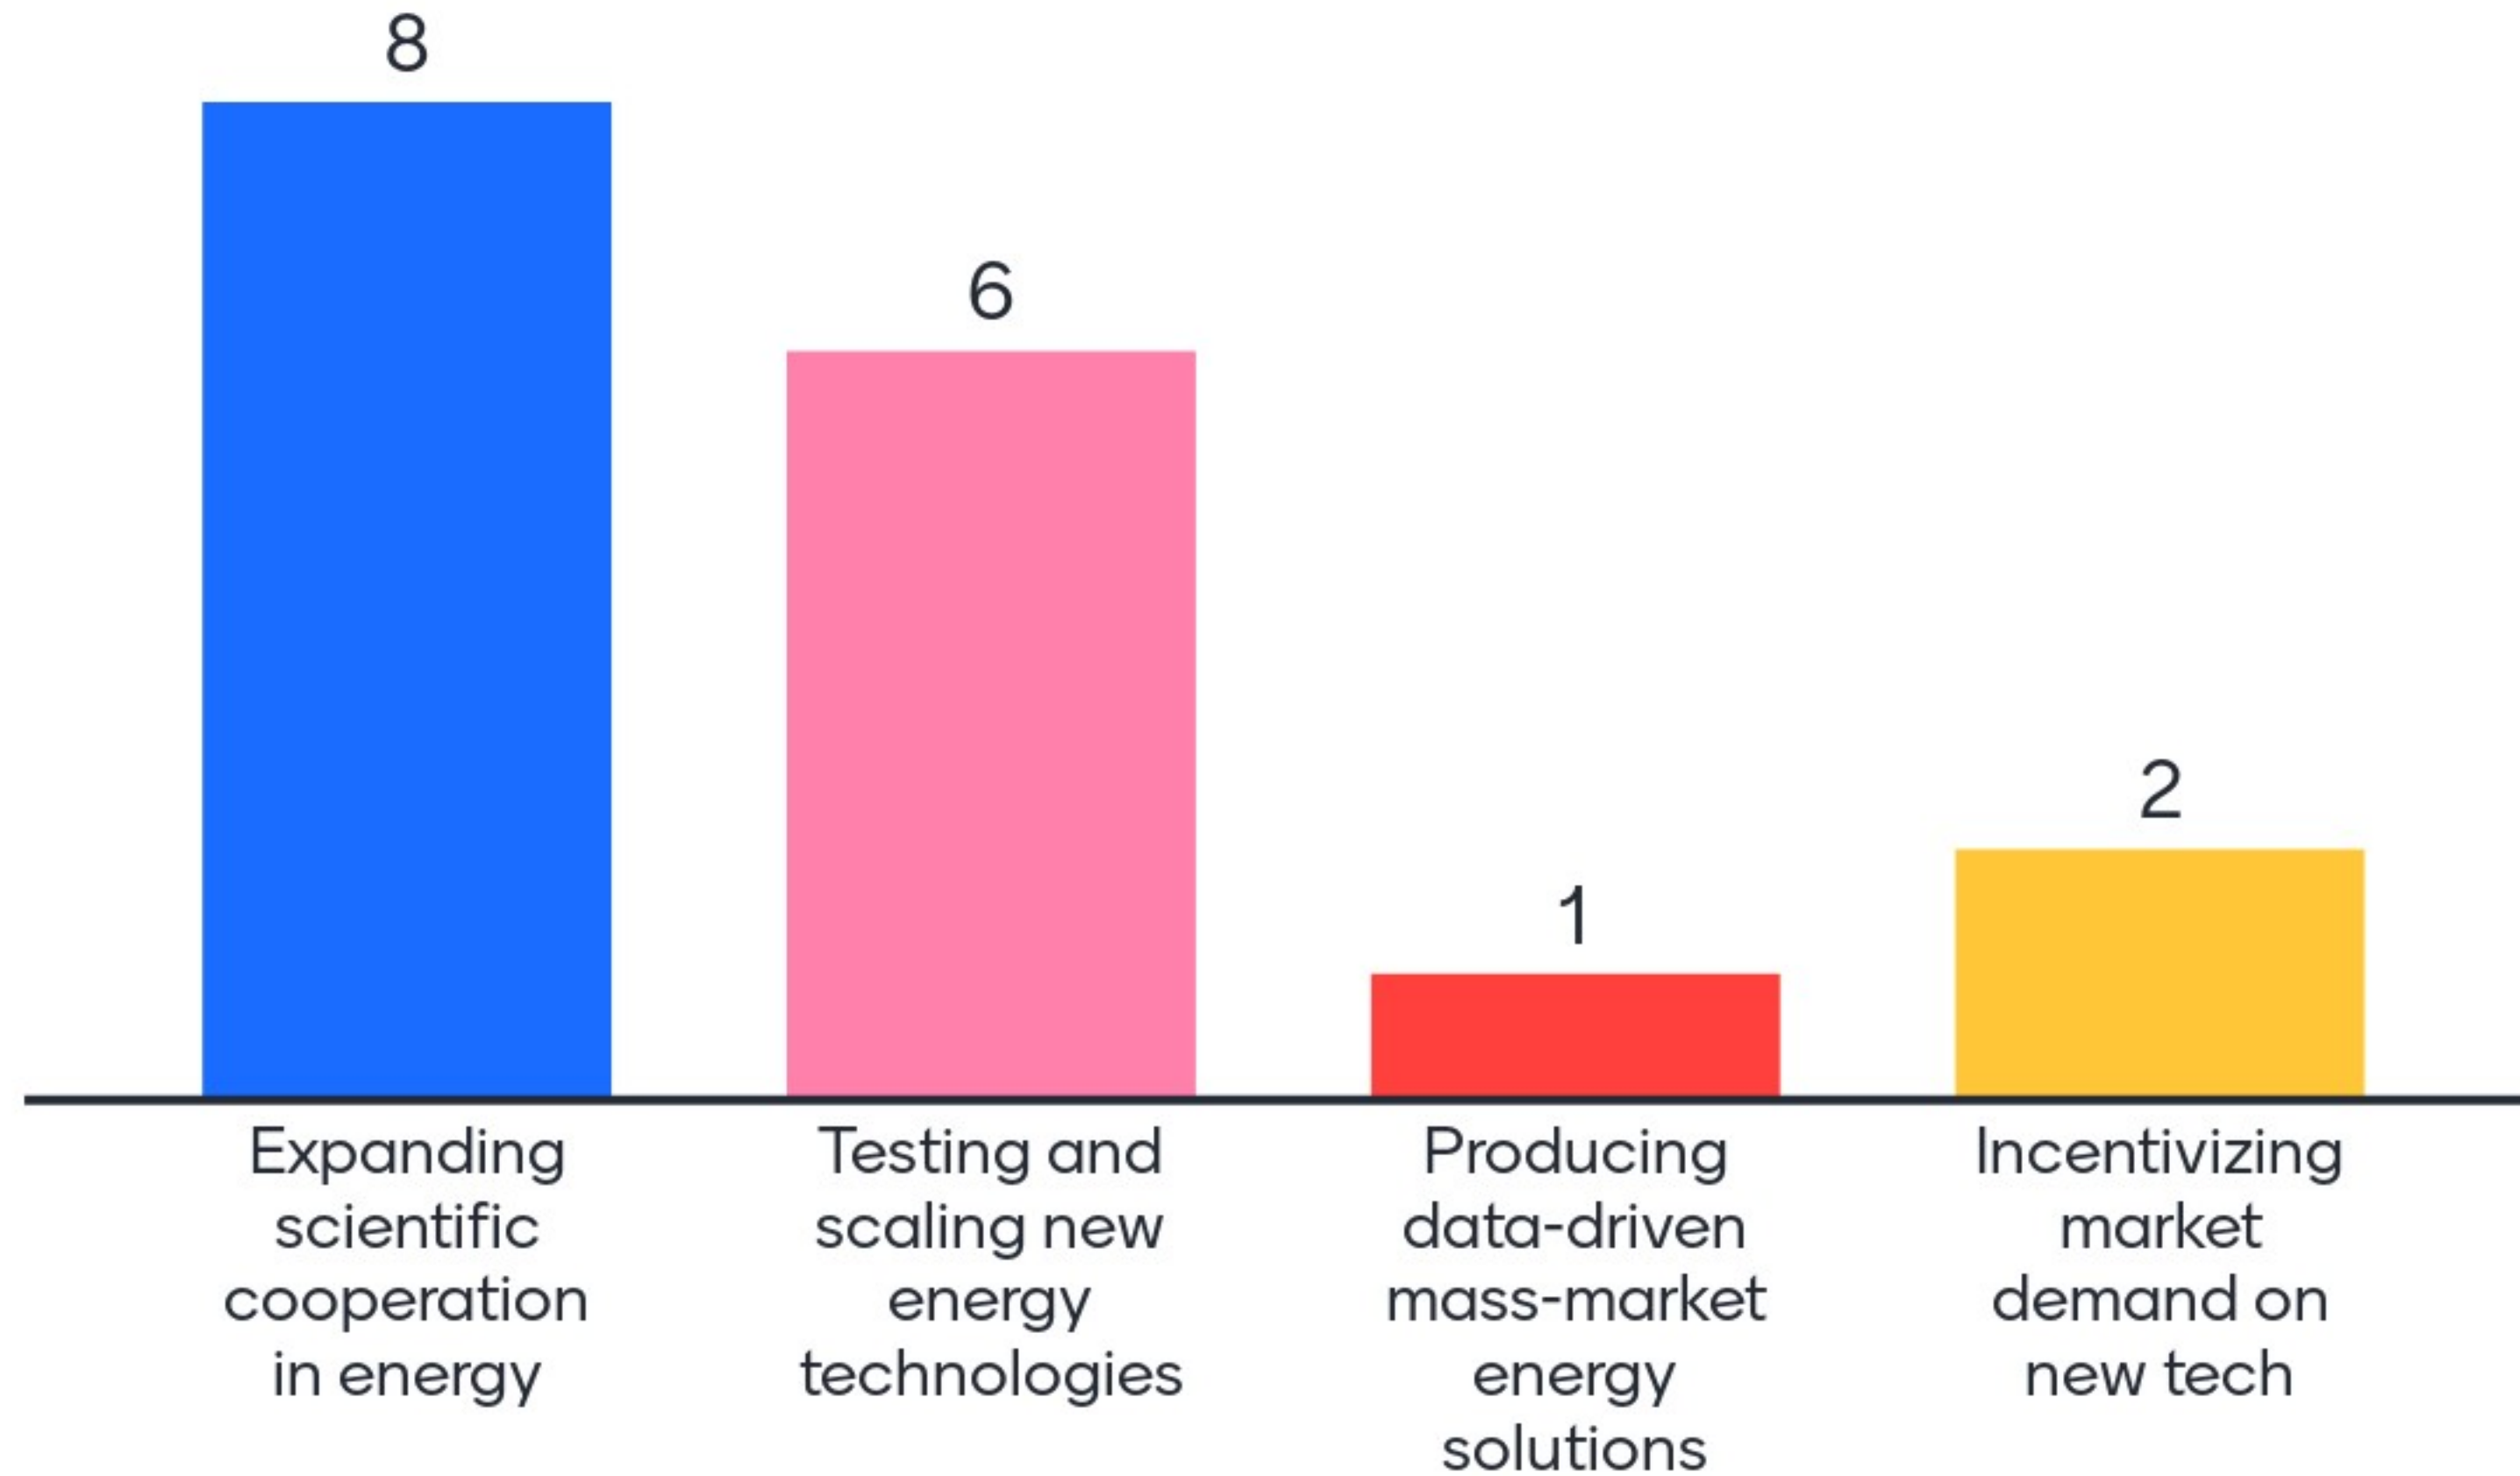

Energy Transition: what issues do you think should be addressed in particular?

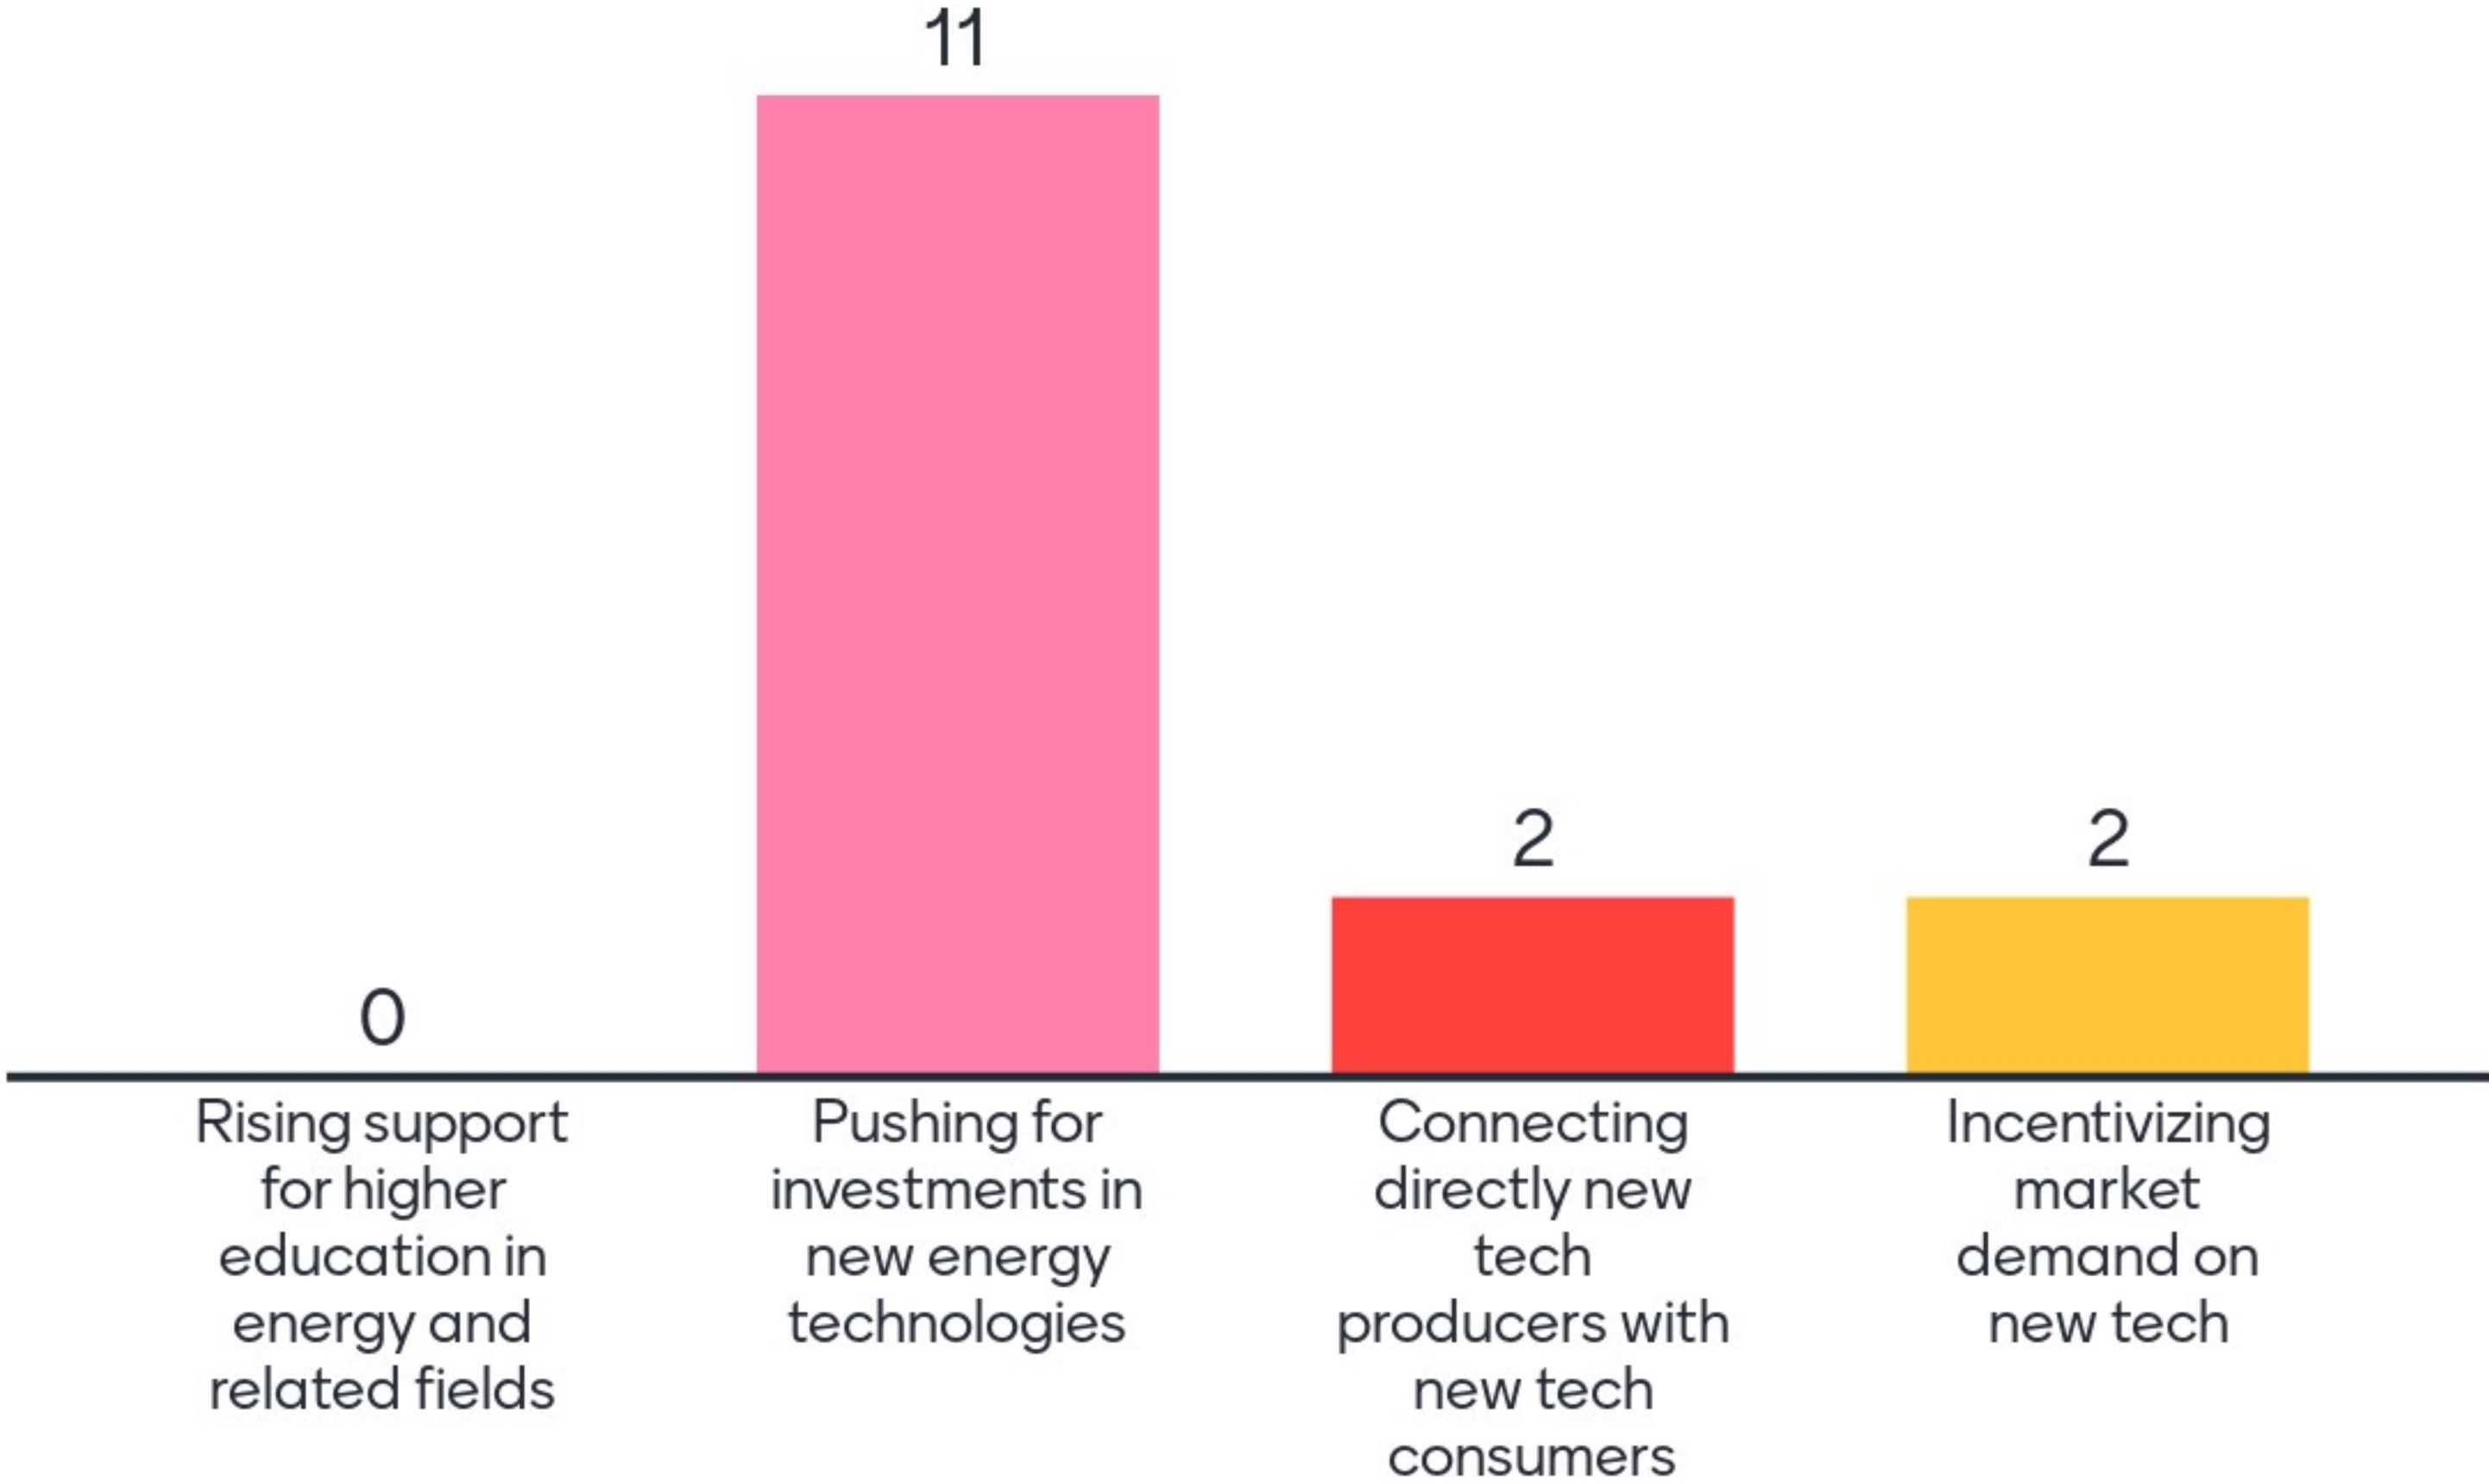

Enabling SDGs through Inclusive, Just Transition: what issues do you think should be addressed in particular?

Innovation, Technology & Data: what issues do you think should be addressed in particular?

Finance & Investment: what issues do you think should be addressed in particular?

Your turn! What topic not previously mentioned should be added to the compact? Why?

energy policy and youth

Rational Approaches to Energy Balance as a Key to SDG7 achievement

introduction of green (alternative) energy

Traditional Methods to be synchronized with Technical Knowledge

Equitable knowledge sharing or technology transfer (developed and developing countries alike).

Interregional cooperation as a key for SDG7 (like ASEAN, BRICS and etc.)

Socio-economic impacts and job creation in the Just transition

Cyber Security

Urban management in targeting SDG7

Your turn! What topic not previously mentioned should be added to the compact? Why?

The conservation of the environment which needs to be maintained whilst achieving our energy goals.

Energy Transition and SDG's in financial market

Innovation technology and youth employment as there are not a lot of opportunities for young people

regional connectivity for energy equity

strengthen regional connectivity for energy equity

What are your expectations from the future compact?

I believe, that this might help to make voices heard better, because it doesn't look too clear for me.

Youth people will drive these commitments, and I expert that this compact should become the basis for sustainable future

The compacts should have accountability as a key pillar. Since at times commitments are not backed up by actions.

Identifying the Grassroot level Role in achieving SDG7

Sharing of best practices among Member States.

I believe in joining efforts of young scientists from different countries for joint development

Yeah, accountability is important, please make sure as BRICS YEA that your national partners stick to overall commitments

My expectations are benefiting as an individual, a community and a country at large.

Sway political views and decision makers towards more sustainable based policies

What are your expectations from the future compact?

1. Work towards awareness in common people of the countries
2. Involvement of youth in Policy Interventions more
3. International cooperation for innovations and startups in the renewable energy sector
3. Engagement of universities towards SDG 7

The multi stakeholder approach would ensure the actual implementability of the energy compact.

If we can hold people/organizations accountable for their energy compact goals, and substantially push forward SDG 7.

Maybe BRICS could drive other developing countries.. and the compact should be a benchmark
